Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-19, drawn to an integrated circuit, classified in class 257, subclass 421.

II. Claims 20-32, drawn to an apparatus and method for measuring current, classified in class 324, subclass 252. The inventions are distinct, each from the other because of the following reasons:

Inventions group I and group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 20, 26 and 29 of group II do not recite the limitation "said device having a level of sensitivity to magnetic field... to a level of said bias current" of the subcombination. The subcombination has separate utility, such as metal detection or position detection.

A telephone call was made to the attorney of record on April 13 and 14, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: *** 2862

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
